FACULTY OF TECHNOLOGY AND ENGINEERING
B. TECH (IT/CE/CSE/AIML)

Subject: Advanced Web Development Frameworks (ITUE301) | Semester: 5th

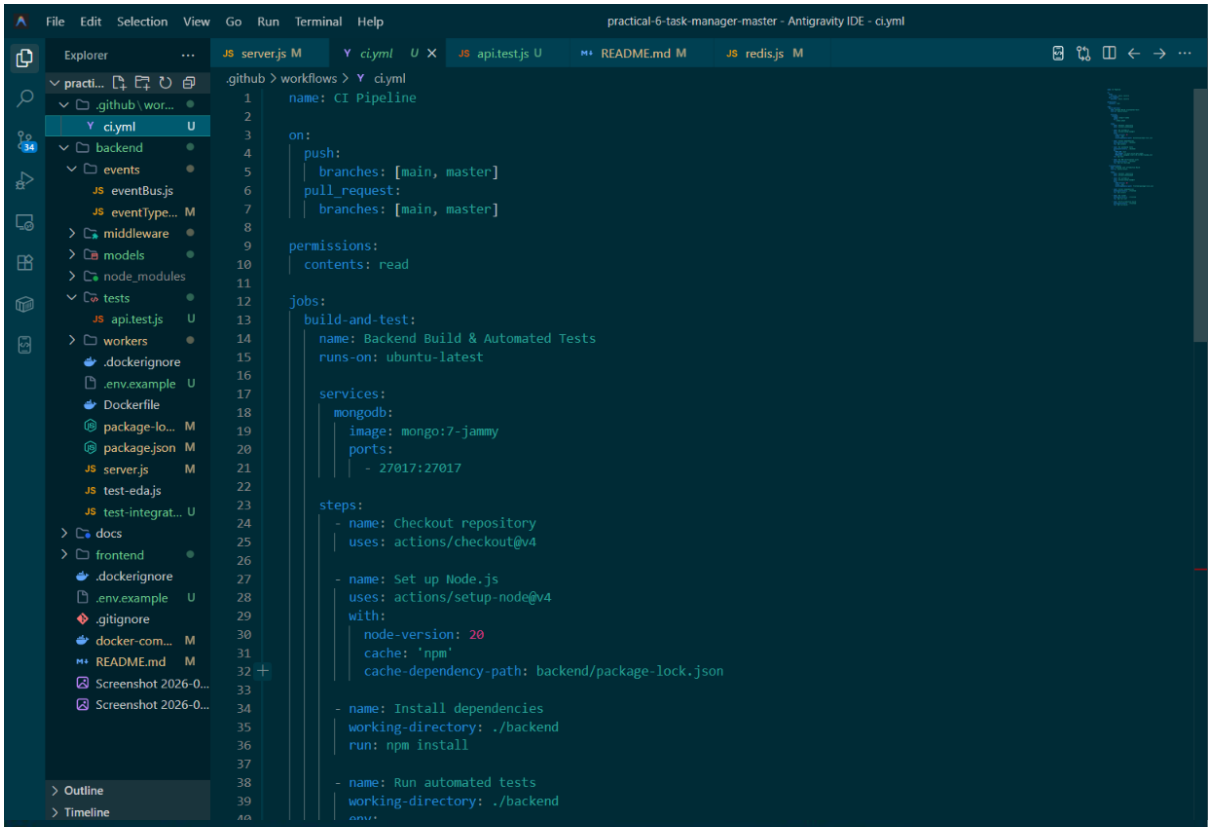

Practical 12: CI/CD Pipeline Using GitHub Actions

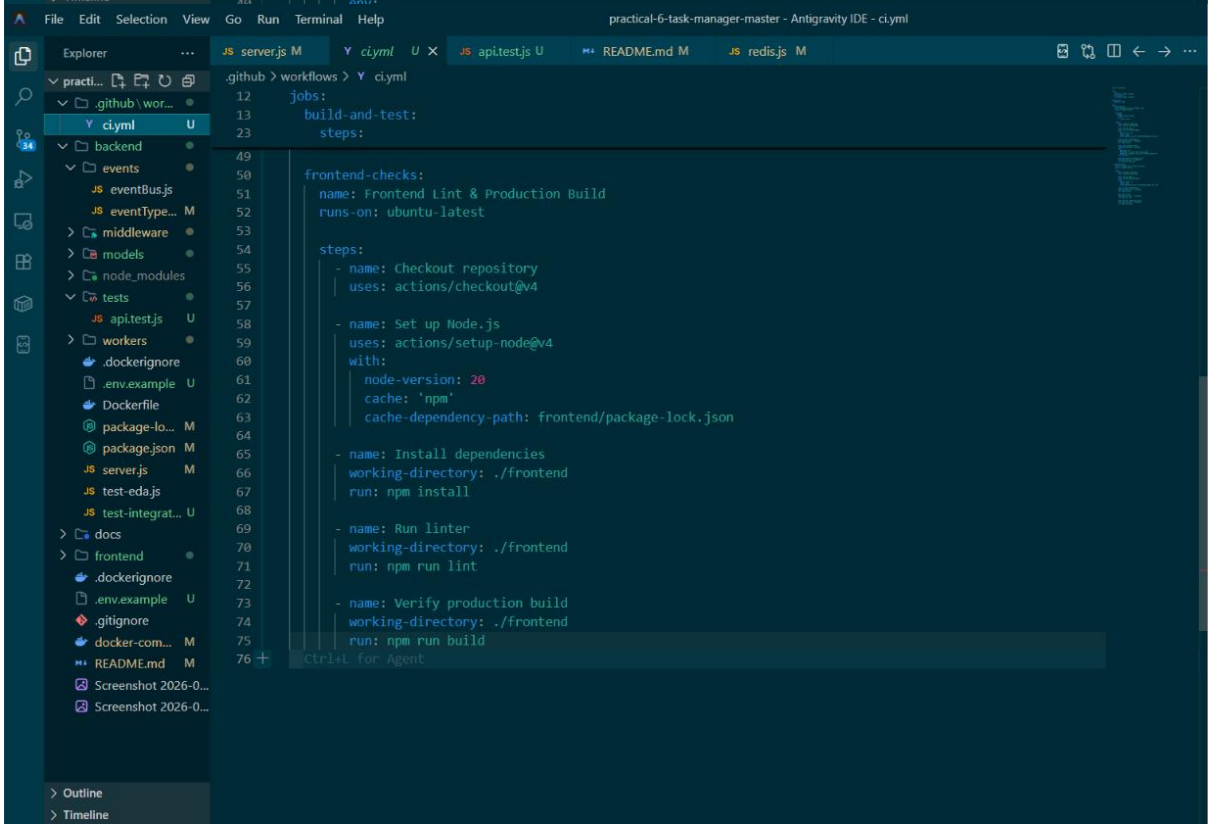

To implement an automated Continuous Integration (CI) pipeline for the existing Task Management application using GitHub Actions. The pipeline should automatically trigger whenever code is pushed to the main branch, install the required dependencies, and execute automated tests to verify the application's correctness.
The workflow must report a clear success or failure status. A deliberately failing test must be demonstrated to understand pipeline failure detection, followed by correcting the test and verifying that the pipeline passes successfully.
The objective is to reduce manual testing effort, detect errors early, and improve the reliability and maintainability of the application through automated testing.
